**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**Claims 1-4 (Canceled without prejudice or disclaimer).**

5. (Currently Amended) An organic light-emitting element comprising:  
an organic electroluminescent substrate having at least a first electrode, an organic layer and a second transparent electrode formed on a substrate;  
a counter substrate; and  
a light extraction layer and an auxiliary electrode for the second transparent electrode, both provided between the organic electroluminescent substrate and the counter substrate;

wherein a total thickness  $d$  of a layer ranging from a light-emitting area in the organic layer to the second transparent electrode satisfies an equation:

$d < \lambda/4$   $[(\lambda:)]$  , where  $\lambda$  is a center wavelength of emitted light  $[(\lambda)]$ .

6. (Currently Amended) An organic light-emitting element according to ~~claim 4~~claim 5, wherein a rib is provided between the organic electroluminescent substrate and the counter substrate to control a thickness of the light extraction layer.

Application No.: S.N. 10/082,183  
Art Unit: 2879

Docket No.: 500.41280X00  
Page 3

7. (Original) An organic light-emitting element according to claim 6,  
wherein the thickness of the light extraction layer is 50  $\mu$ m or more.

8. (Original) An organic light-emitting element according to claim 6,  
wherein the rib is formed on the counter substrate.

9. (Original) An organic light-emitting element according to claim 8,  
wherein the rib is formed from glass or optically cured resin.

10. (Original) An organic light-emitting element according to claim 8,  
wherein the rib is formed on a sealed portion of the organic electroluminescent  
substrate and the counter substrate.

11. (Currently Amended) An organic light-emitting element according to  
claim 4 claim 5, wherein color filters are formed between the organic  
electroluminescent substrate and the counter substrate.

12. (Original) An organic light-emitting element according to claim 11,  
wherein the color filters are formed on the counter substrate.

13. (Currently Amended) An organic light-emitting element according to  
claim 4 claim 5, wherein a moisture absorbing layer is provided on the counter  
substrate.

Application No.: S.N. 10/082,183  
Art Unit: 2879

Docket No.: 500.41280X00  
Page 4

14. (Currently Amended) An organic light-emitting element according to  
~~claim 4~~ claim 5, wherein a moisture absorbing layer is provided around a portion  
sealing the organic electroluminescent substrate and the counter substrate.

15. (Currently Amended) An organic light-emitting element according to  
~~claim 4~~ claim 5, wherein the auxiliary electrode is formed between pixels.

16. (Currently Amended) An organic light-emitting element according to  
~~claim 4~~ claim 5, wherein the auxiliary electrode is formed between pixels formed on  
the counter substrate.

17. (Currently Amended) An organic light-emitting element according to  
~~claim 4~~ claim 5, wherein the auxiliary electrode is formed on the second transparent  
electrode.

18. (Original) An organic light-emitting element according to claim 17,  
wherein a bonding layer is provided to bring the second transparent electrode and  
the auxiliary electrode into ohmic contact with each other.

19. (Currently Amended) An organic light-emitting element according to  
~~claim 4~~ claim 5, wherein the second transparent electrode is formed from a very thin  
metal film with a high transmissivity.

Application No.: S.N. 10/082,183  
Art Unit: 2879

Docket No.: 500.41280X00  
Page 5

20. (Currently Amended) An organic light-emitting display using the organic light-emitting element of claim 4 claim 5.

21. (Previously Presented) An organic light-emitting display according to claim 20, wherein the organic light-emitting element comprises pixels of different colors.

22. (Previously Presented) An organic light-emitting display according to claim 20, wherein the second transparent electrode of the organic light-emitting element is formed from a very thin metal film with a high transmissivity.

23. (Original) A mobile phone using the organic light-emitting display of claim 20 in a display portion.

24. (Currently Amended) A organic light-emitting element according to claim 4 claim 20, wherein said first electrode is a transparent electrode.

25. (Previously Presented) A organic light-emitting element according to claim 5, wherein said first electrode is a transparent electrode.

26. (Previously Presented) A organic light-emitting element according to claim 12, wherein said first electrode is a transparent electrode, wherein white light is emitted from said second transparent electrode into said light extraction layer, and wherein colored light is emitted from said counter substrate.

Application No.: S.N. 10/082,183  
Art Unit: 2879
